Abstract (en)

[origin: EP3590382A1] A luggage tag (100) may include a rear frame (104), a front frame (102) pivotably connected to the rear frame and rotatable about a pivot axis (P) between first and second positions relative to the rear frame, and a securement element (220) defining a side opening (222). When the front frame is oriented in the first position, a dimension of the side opening may be reduced to limit removal of the luggage tag from a securement member. When the front frame is oriented in the second position, the dimension of the side opening may be increased to allow removal of the luggage tag from the securement member.
