Abstract (en)

[origin: EP3591631A1] A method of starting an information-capturing device includes: receiving an event message including a destination information by a near-field communication technology, comparing a first identification code of the information-capturing device with the dedicated identification code specified by the destination information contained in the event message, starting the information-capturing device to capture ambient data if the first identification code matches the dedicated identification code specified by the destination information contained in the event message, and broadcasting the event message by the near-field communication technology if the first identification code does not match the dedicated identification code specified by the destination information contained in the event message.
