Abstract (en)

[origin: WO2018162350A1] The invention relates to a mounting system for performing an installation operation in a lift shaft of a lift system. The mounting system (1) has a mounting device (5) with a carrier component (3) and with a mechatronic installation component, and further has a displacement component (15) arranged above the mounting device (5) in the lift shaft (103) and has a supporting means (17) attached at least indirectly to the carrier component (3). The displacement component (15) can displace the carrier component (3) and thus the mounting device (5) in the lift shaft (103) by means of the supporting means (17), wherein the carrier component (3) can be supported by means of an upper support roller (21) on a supporting wall (108) of the lift shaft (103) at least during a displacement in the lift shaft (103). According to the invention, the supporting means (17) of the mounting system (1) has a diagonal pull α with respect to the perpendicular in the direction of the supporting wall (108) of the lift shaft (103). The mounting system (1) also has a compensating element (24) that is designed and arranged such that it counteracts a tilting of the carrier component (3) about the upper supporting roller (21) in the direction of the supporting wall (108) during a displacement of the carrier component (3) in the lift shaft (103).
