Abstract (en)

[origin: WO2018162108A1] The invention relates to an actuation module (2) for a door handle (1), in particular for a motor vehicle, comprising an actuation element (3) which can be coupled to an electric component (7) for triggering a switching signal; at least part of the actuation element (3) can be placed in a receptacle (4) inside which a sealing compound (11) for sealing the electric components (7) is disposed; a bearing element which is made of an elastic material (9) and is designed to move the actuation element (3) is arranged on the actuation element (3).
