Abstract (en)

[origin: WO2018162790A1] Invention relates to a liquefied gas tank arrangement (10), comprising a liquefied gas tank (12), wherein the gas in the tank (12) forms a liquid phase section (12.1) and a gaseous phase section (12.2) in said tank (12), the arrangement comprising a main supply line (14) configured to feed gas to a gas consumer (16), an auxiliary vessel (22) provided with a heating means (24) configured to transfer heat into the auxiliary vessel (22), a first gas line (26), which connects the gaseous phase section (12.2) of the tank (12) and the auxiliary vessel (22), the first gas line (26) comprising a first valve (28), a second gas line (30), which connects the auxiliary vessel (22) and the main supply line (14), the second gas line (30) comprising a second valve (32), and a third gas line (34), which connects the liquid phase section (12.1) in the tank (12) and the auxiliary vessel (22), the third gas line (34) comprising a third valve (36). Invention relates also to operating the tank arrangement (10).
