Abstract (en)
Among other things, a system includes a card-game table that includes visually defined regions on a surface of the card-game table to accommodate one or more card hands of each of one or more participants in addition to one or more separate card hands of a house entity. An analysis system is associated with the card table and configured to receive data representing at least a value associated with each card from a group of cards dealt by a dealer to the one or more hands of each participant in addition to the one or more separate hands of the house; process the received data to calculate scores and odds for the one or more hands of each participant in addition to the one or more separate hands of the house, and generate an output signal indicative of the calculated scores and odds. The system includes as spectator system coupled to the analysis system via a network so that the analysis system can receive a spectator bet from a spectator using the spectator system and the spectator system can receive a final result of a game from the analysis system.
