Abstract (en)

Container (10) and apparatus (100) for collecting material, preferably clothing, especially second hand. Each container (10) comprises a door (19) provided with an electrically drivable lock (21) associated with a microprocessor (27) connected to an antenna (28). The container (10) has no permanent electric power and the current to actuate the lock (21) and the microprocessor is selectively transferable by induction from an external terminal device (22) drivable by an authorized operator, under the control of the microprocessor (27). The apparatus (100) also comprises a remote central processor (36) configured to send to each external terminal device (22) information about the container (10) from which to remove the material.
