Abstract (en)

A method for installing a lighting device (10), such as, for example, an LED module comprising an elongated body having a first, light-emitting surface (10a) and at least one second rear (10b) or side surface, with an encapsulation layer at the second surface (10b), and a distribution of electrically-powered light radiation sources (12) arranged in the elongated body along the length thereof to project light radiation towards the light-emitting surface (10a). Electrically-conductive formations (14) are provided for transferring electrical signals with respect to the light radiation sources (12), which pass through one or more passageways (140) in the encapsulation layer (100) at the second surface (10b).
