Abstract (en)
[origin: EP3594669A1] A method for determining a thermal impedance of a sample device is described. According to the method, a sample device is heated to an initial temperature. A pulsed power including a sequence of pulses is applied to the sample device. Temperature of the sample device is measured in a time-dependent manner. A thermal impedance of the sample device is determined based on the temperature of the sample device and the pulsed power.
