Abstract (en)
[origin: WO2018167421A1] The invention relates to a system (SYST) for holding an infant in position in order to prevent gastric reflux or suffocation, comprising a mechanical structure (L), a bedding element (MA) with a support surface (S), and also a harness (H), the harness (H) comprising at least three planar holding flaps (V1, V2, V3) which each have a surface in contact with said support surface (S), each one extending towards an edge of said bedding element (MA) and each of them ending in a fastening element adapted for rapid attachment to said mechanical structure (L).
