Abstract (en)
[origin: WO2018167248A1] The invention relates to a formwork with two formwork elements (2, 3), each of which has a formwork front face (5) that is supplied with concrete and a formwork rear face (5). The formwork elements are hinged together or can be hinged together in a preferably releasable manner in order to be pivotal from a first position for supplying concrete to the formwork front faces (5) to a second position, in which the formwork rear faces (6) at least partly face each other. The invention is characterized in that at least one lifting device (13) is provided which is supported between the formwork and an underlying surface and by means of which the formwork elements (2, 3) can preferably be partly lifted and converted from the first position at least partly to the second position.
