Abstract (en)

[origin: WO2018167054A1] The invention relates to a system (10) for filling containers (100), in particular syringes, comprising a multitrack conveying device for conveying a plurality of rows of containers (100) along a conveying direction; at least two weighing devices which are arranged behind one another along the conveying direction; at least one multitrack filling station (20), wherein the number of tracks of the filling station corresponds to the number of tracks of the conveying device; at least one closing station (14); means (24, 44) for depositing in each case a row of containers (100) on one of the at least two weighing devices (30); and a controller which is designed to control the conveying device such that each row of containers (100) is placed at a respective weighing device (30) for a filling operation, wherein the row of containers is only guided past the other weighing devices (30) without being placed at these other weighing devices (30) for a filling operation. The invention also relates to a corresponding method.
