Abstract (en)
[origin: WO2018166644A1] The invention relates to a sanitary insert unit (116) having a functional unit which provides a through-opening (8) and has an adjustment element (9), which adjustment element (9) is mounted such that it can be moved or adjusted axially in and out of the through-opening (8), the adjustment element (9) being drive-connected to an actuating element (10) which is mounted on the outflow side of the through-opening (8) and can be actuated from the outside. The insert unit (116) according to the invention is characterised in that a sliding guide (11) is arranged in the drive connection between the actuating element (10) and the adjustment element (9) and has at least one oblique contact face (12) which converts a rotary movement of the actuating element (10) into an axial adjustment movement of the adjustment element (9).
