Abstract (en)
[origin: WO2018167392A1] The invention concerns an external opening control (2) for a motor vehicle door comprising a support (6); a handle mounted on the support, capable of pivoting in an opening direction for controlling a lock of the door with a view to opening said door; an immobilisation system (18) mounted on the support, with a movable inertial element (20) capable of moving in the event of the support (6) accelerating so as to immobilise the lock control. The control comprises a protection barrier (32) for protecting the movable inertial element (20), situated to a side of said element that is opposite the opening direction of the handle, said barrier (32) protecting said element from an operation carried out by an operator for mounting the control on the door.
