Abstract (en)

[origin: WO2018167386A1] The present invention relates to a one-piece device for a powered speaker enclosure. According to the invention, the powered speaker enclosure comprises in particular: two central loudspeakers intended to reproduce low frequencies, one located at the front and the other located close to and behind the latter, pneumatically connected to each other in a sealed compartment, at least one vent not communicating pneumatically with the sealed compartment and connecting the inner portion of the enclosure to the outer portion thereof, wherein each of the two loudspeakers (1) and (2), intended to reproduce low frequencies, is powered by separate amplification channels (3) and (3'), each having their respective frequency band.
