Abstract (en)

[origin: CN110733515A] The invention relates to a method for controlling a process for charging at least one energy storage for a rail vehicle, wherein the energy storage is used to supply electrical energy to a drive of the rail vehicle and the energy storage is charged by means of an electrical conductor arranged in a limited region of a line segment of the rail network, and wherein a charging voltage can be applied to the conductor by means of a charging device on the segment side, otherwise a low voltage is applied to the conductor.
