Abstract (en)

[origin: US2020024020A1] The invention describes, and illustrates, a label roll having a roll core and having a label tape, which is wound up onto the roll core. In order that the amount of time and effort required for changing over the label rolls can be reduced without a disproportionately large amount of space having to be provided for the label compartment, provision is made for the roll core to have a plurality of rollers distributed over its circumference, around which the label tape is wound.
