Abstract (en)

A compressor protection module (200) comprises: a signal processing means (230); a first connecting means (205) adapted to couple the signal processing means(230) to a compressor (100) of a refrigerant system such as to have the signal processing means (230) provide the compressor (100) with at least one protection function; and a second connecting means (240) adapted to receive and operate at least one extension module (300), wherein the extension module (300) provides the compressor (100) with at least one optional function. Moreover, an extension module (300) that can be received and operated by such a compressor protection module (200), and a modular compressor protection system (400) including both the compressor protection module (200) and the extension module (300) are also disclosed.
