Abstract (en)
[origin: RU2709887C1] FIELD: sanitation equipment.SUBSTANCE: invention relates to a sanitary shower device comprising housing (1), comprising a liquid inlet device (4), jet disc (5) and a liquid directing device (7) arranged between them, wherein each of the jet disc jet discharge elements (6) has the first and second liquid inlet (8, 9) and is intended for discharging liquid supplied through the first fluid inlet holes, in the form of the first shower jet of the first circuit (S1) of jets and liquid supplied through the second liquid inlet holes, in the form of the second shower jet of the second jets circuit (S2), different from the first jets pattern, liquid control device (2) comprising fluid outlet connection device (10) and user-controlled fluid control unit (11), as well as liquid pipeline (3), providing fluid connection of fluid inlet device with liquid outlet connection device. According to the invention, the fluid directing device (7) comprises two separate liquid channels (16, 17), from which the first liquid channel connects the first liquid inlet (8) with the first inlet of the shower casing, and the second fluid duct connects the second fluid inlet (9) with second inlet of shower housing. Fluid connecting device (10) comprises first outlet connector (12) and second outlet connector (13). Liquid line (3) comprises first fluid channel (18) extending from first outlet connector to first inlet of shower housing, and second liquid channel (19) extending from second outlet connector to second inlet of shower housing, wherein liquid control unit (11) comprises user-controlled distributing element (20) for controlled fluid feed into first and / or second outlet connector.EFFECT: it is possible to use, for example, as upper sanitary showers.10 cl, 6 dwg
