Abstract (en)

[origin: CN110395428A] A method for producing blister packs (2) for pharmaceutical products (4) comprises the following steps of: forming blister pockets (8) in a base film (6), each blister pocket (8) having at least two layers of shape with a first groove (16) and a lower second groove (18); filling the second recess (18) of the blister pocket (8) with a pharmaceutical product (4); placing a strip (14) of active material in a first recess (16) of each blister pocket (8) above the medical product (4), wherein the strip (14) of active material rests on at least one support surface (20) of the first recess (16) next to the second recess (18); sealing the cover film (12) onto a mesh (10) of the base film (6) arranged around the blister pocket (8) while sealing to the strip (14) of active material, thereby forming a sealed blister mesh; and punching a single blister pack (2) from the blister web.
