Abstract (en)

Embodiments relate to a vehicle, an apparatus, a method, and a computer program for monitoring a vehicle, a mobile transceiver, an apparatus, a method, and a computer program for a mobile transceiver, an application server, an apparatus, a method, and a computer program for an application server. The apparatus (10) for monitoring a vehicle (100) comprises one or more interfaces (12) configured to communicate in a mobile communication system (400), and a control module (14) configured to control one or more interfaces (12). The control module (14) is further configured to determine a parking situation of the vehicle (100), detect a trigger event, and to transmit a message comprising information on the trigger event to a predefined device in case the trigger event is detected.
