Abstract (en)

[origin: WO2018177654A1] A thoracic restraint and safety device, comprising a restraint harness (2) configured to adjust to the upper part of the back of a patient (P); a first fastening strap (3) extending laterally from the restraint harness (2), and having a first joining end (31); and a second fastening strap (4) extending laterally from the restraint harness (2) in the opposite direction to the first fastening strap (3), and having a second joining end (41). Both joining ends (31, 41) are configured to join together around a bed or stretcher (C). Wherein the second fastening strap (4) comprises an auxiliary end (5) for connecting a tensioning element (6), joined in turn to the first joining end (31), enabling gradual tightening of the fastening straps (3, 4) around the bed or stretcher (C).
