Abstract (en)  
[origin: CA3061298A1] The invention relates to a comminuting device (1) for comminuting material to be comminuted, comprising a machine frame (4), a driven comminuting roller (5), which is mounted on the machine frame (4) and has comminuting tools (22), a comb (26a) having counter-tools (27), and a comb flap (28), which is pivotably mounted on the machine frame (4), wherein the comminuting roller (5) interacts with the comb (26a) for comminution, wherein the comb (26a) is pivotably mounted on the comb flap (28) in the region of the upper end (29) of the comb, wherein at least one spring element (30) acts on the comb (26a) by means of the first end (31) of said spring element and wherein the comb (26a) is resiliently supported by means of the spring element (30). According to the invention, the spring element (30) is supported on the machine frame (4) by means of the second end (32) of the spring element.
