Abstract (en)
[origin: WO2018178235A1] The invention relates to a hairstyling razor (1), which is used for hairstyling and comprises a handle (10) and a razor head (2) connected to the handle (10). At least one working section (3) is arranged on a longitudinal side (12) of the razor head (2), which working section is set back in relation to an alignment line (120) of the longitudinal side (12). A hairstyling blade (4) having at least one cutting edge (14) is held in the razor head (2) and arranged therein in such a way that, in the working section (3), the cutting edge (14) of the hairstyling blade is at least partly exposed and does not protrude beyond the alignment line (120). The razor head (2) comprises a guiding device (5) having at least one contact surface (15) for the hairs to be cut. The contact surface (15) is arranged, at least in some sections, at an angle of between 16° and 26° to the plane of the hairstyling blade (4) held in the razor head (2) such that the hairs to be cut lie at a defined angle to the cutting edge (14) when the contact surface (15) is applied to the hairs.
