Abstract (en)

[origin: WO2018172641A1] The present invention concerns an airbag device comprising a security module (10) comprising a rigid body forming a casing (12) and a firing channel (20) comprising a top wall (21), two transverse guide flanges (22, 23) and two transverse walls (32B), said body comprising two transverse flanks having teeth (16) engaged in windows (30) provided on said transverse flanges (22, 23) and two side walls (17) in each of which an opening (17B) is provided, positioned close to the vertical of one of said transverse walls (32B) so as to allow two rods (T) that have been inserted through these openings (17B) to bear on these transverse walls (32B) so as to pivot in order to exert a lever effect causing said module (10) to move in translation and the teeth (16) situated on one of said transverse flanks to disengage from the corresponding windows (30).
