Abstract (en)
[origin: CN111094147A] A dispensing device affixed to the outside of a flexible container comprising a top part of the device, and a bottom part including a pump chamber, a neck portion, and a dispensing head having an outlet at the end of a dispensing channel. The dispensing channel and the outlet are situated in a portion of the dispensing head that extends below the plane of the neck portion. The top part is sealed to the bottom part creating a channel between the pump chamber and the dispensing side of the dispenser. The area of the dispensing element between the pump chamber and the distal end of the dispensinghead, referred herein as the neck portion, is not sealed to the container, causing the neck portion of the dispensing device to flex, pinching shut the channel that connects the pump chamber to the dispensing head.
