Abstract (en)
[origin: WO2018172163A1] The invention relates to a dosage pod (1) comprising a shell (2) forming a receptacle (3) containing a product to be infused (4) and, around the receptacle (3), a first annular peripheral zone (5). The dosage pod (1) is characterised in that it further comprises a second peripheral zone (7) radially extending from at least one part of the first peripheral zone (5) and having at least one material and/or one thickness that differs from the material and/or the thickness of the first peripheral zone (5). The second peripheral zone (7) particularly comprises a retention element (71) made of paperboard. This retention element (71) is annular or semi-annular and comprises a projection in the form of a tab (72). The dosage pod (1) according to the invention is configured to cooperate with infusion units (10) of machines placed on board aeroplanes, in particular.
