Abstract (en)

[origin: WO2018172282A1] A storage container comprising: (i) an upper end and a lower end, and having side walls which extend between the upper end and the lower end thereby creating a chamber; (ii) an upper closure which closes the upper end of said container, said upper closure having an opening located therein; and (iii) a lower closure which closes the lower end of said container, said lower closure having a discharge port located therein; the chamber having located therein a plurality of plates, each plate having a top surface, a bottom surface, and sides; wherein each of said plates is positioned in said chamber with one side located higher in the chamber than its opposing side so that the top surface of said plate slopes towards the lower end of said container, and each of said plates is positioned in said chamber with a gap between the relatively higher side of each of said plates and said side wall and a gap between the relatively lower side of each of said plates and said side wall.
