Abstract (en)
[origin: WO2018177625A1] A crank-handle assembly (100) includes an arm (102) having a first end (104) and a second end (106). An axle (108) is fixedly coupled to the first end (104) of the arm (102) along a first axis X-X'. The first axis X-X' is angularly oriented to the arm (102) and parallel to the axle (108). A handle (110) is pivotally coupled to the arm (102) at the second end (106). The crank-handle assembly (100) is characterized in that the handle (110) is adapted to pivot between an operational position and a folding position. The handle (110) is parallel to the first axis X-X' in the operational position. The handle (110) is parallel to the arm (102), and folded on a side of the arm (102), in the folded position.
