Abstract (en)

[origin: WO2019053209A1] The invention relates to a mobile vehicle barrier (10) comprising a base section (20) and a protruding section (30). The center of gravity of the mobile vehicle barrier can be found in the protruding section. Additionally, the protruding section is arranged at a distance from a longitudinal edge of the base section. Thus, in the event of being driven over by a vehicle, the vehicle barrier can be tilted in the travel direction of the vehicle, and the vehicle is jacked up onto the tilted vehicle barrier.
