Abstract (en)  
[origin: WO2018178928A1] This invention relates to the protection of an automatic teller machine (hereinafter an ATM) (10) against unauthorised access, tampering or attempted unauthorised access. There is provided a protective system including a house (12), a door (16) which provides access to the housing or to an interior of the housing and at least one banknote containing cartridge (20) which is insertable into or which engaged with the housing with the cartridge then being locatable at an operative position. A sensing arrangement which produces an output signal upon detecting at least one of the following : unauthorised movement of the cartridge from the operative position (28); irregular door movement (40); or wherein the control unit, in response to the output signal, initiates actuation of the mechanism.
