Abstract (en)

[origin: WO2018172520A1] The invention relates to a pumping and comminution device (1) comprising: at least one submersible pump (3) located in a container (2) that is suitable for receiving an inflow material (5) and a drive (4) for driving the submersible pump (3). In said device, the at least one submersible pump (3) comprises an impeller (9) located in a submersible pump housing (8), said submersible pump housing (8) having a suction connection (7) for suctioning the inflow material (5) into the submersible pump (3). Tools (10) are located on the inner face of the submersible pump housing (8) and/or on the impeller (9), allowing solids contained in the inflow material (5) to be comminuted by the tools (10).
