Abstract (en)

[origin: WO2019185369A1] The invention relates to a pressurised container (10) and to a method for producing an outer casing (12) for a pressurised container (10) of this type. The pressurised container (10) comprises an outer casing (12), which has a cylinder-like central region (10) and two end regions (16, 18) attached thereto, a hollow-cylindrical extension (20) being formed in each case at both axial ends of the cylinder-like central region (14) of the outer casing (12), which extension projects beyond the respective end region (16, 18). According to the invention, each hollow-cylindrical extension (20) transitions at the open end thereof into a plurality of fastening elements (36), each of which has a planar connection face (38) arranged radially externally.
