Abstract (en)  
[origin: WO2018178544A1] - The invention concerns a system (1) for detecting the level of energy experienced by a motor vehicle part (2, 4), comprising at least one detection member (11) for detecting the mechanical energy experienced by said part (2, 4). The detection member (11) delimits a closed contour of a surface of said part (2, 4), and the detection member (11) is capable of detecting the mechanical energy experienced by said part (2, 4), and capable of distinguishing between the mechanical energy experienced within said delimited surface (3) and the mechanical energy experienced outside said delimited surface (3).
