Abstract (en)

[origin: US2018275751A1] Systems and methods are disclosed for the index, search, and retrieval of user interface content. In one implementation, an image of a user interface as presented to a user via a display device can be captured. The image can be processed to identify a content element depicted within the image. The content element can be associated with the image. The image as associated with the content element can be stored in relation to the user.
