Abstract (en)

[origin: WO2018177751A1] The invention relates to a device (1) for outputting audio signals into the interior (2) of a motor vehicle (3), said interior forming a part of a passenger compartment in particular, comprising: an audio output device (4) which comprises multiple audio output elements (4a - 4d) that are arranged or can be arranged in the interior of the motor vehicle (3), and a controller (5) which is paired or can be paired with the audio output device (4) and which is designed to control at least one output parameter of the audio signals that can be output via the respective audio output elements (4a - 4d). The controller (5) is designed to control the at least one output parameter of each audio output element (4a - 4d) of the audio output device (4) on the basis of alignment information generated by a detection device (6), which is designed to detect the alignment and/or movement of a chassis (7) of a motor vehicle (3) relative to an underlying surface (U) and generate alignment information that describes the detected alignment and/or movement of the chassis (7) of the motor vehicle (3) relative to the underlying surface (U).
