Abstract (en)

Fluid centrifuge and method for centrifuging a fluid with a centrifuge: the fluid centrifuge comprising: a frame, a rotor rotatably mounted about an axis of rotation, on the frame, and a cover for protecting the frame and the rotor, wherein the rotor comprises a unique holder intended to receive a cartridge with a fluid to be centrifuged, and the cover comprises an opening adapted to the size of the holder to allow insertion and removal of a cartridge; the application further comprises a method for centrifuging a fluid with a centrifuge, comprising: providing a fluid in a holder of a rotor of the centrifuge; subjecting the fluid to a predetermined centrifugation cycle; sensing the position of the holder relative to a centrifuge frame and stopping the rotor so that the holder is positioned in correspondence with an opening of the centrifuge.
