Abstract (en)

[origin: EP3604175A1] A capsule (100) for machines for preparing infused beverages is described, comprising: a body (2) shaped like a bowl, comprising a side wall (4) extending around an axis (X-X) and a bottom wall (3); said body being made of paper or paper material; said body (2) being sized so as to contain a predetermined amount of a powdered preparation for preparing an infused beverage; said capsule (100) being further provided with an annular peripheral edge (18) designed to abut against a bearing surface of an infusion chamber of an infusion assembly when the capsule (100) is inserted into said chamber; said annular peripheral edge (18) comprising a first annular portion (19) made integrally with said bowl body (2); said first annular portion (19) having a head surface (26) arranged substantially parallel to the axis (X-X) at its radially outer perimeter; and an annular reinforcing element (20) comprising a second annular portion (21) applied to said first annular portion (19), said second annular portion (21) having a head surface (26) arranged substantially parallel to the axis (X-X) at its radially outer perimeter; at least one liquid-proofing glue or resin layer applied at least at and covering said head surfaces (26, 27). A process for making said capsule is also described.
