Abstract (en)

[origin: EP3604590A1] A wire rod according to an aspect of the present invention includes a predetermined chemical composition, in which an average value of a compositional ratio ε of a complex oxide satisfies $0.00 \leq \varepsilon < 3.00$, measured in a central portion, and an average value of an equivalent circle diameter of the complex oxide is 6.0 μm or less, measured in the central portion. A flat steel wire according to another aspect of the present invention includes a predetermined chemical composition, in which an average value of a compositional ratio ε of a complex oxide satisfies $0.00 \leq \varepsilon < 3.00$, measured in a center portion, and an average value of an equivalent circle diameter of the complex oxide is 3.0 μm or less, measured in the center portion.
