Abstract (en)
The invention relates to a runner holder divided into a first part and a second part, the first part comprising a first end of the runner holder and the second part comprising a second end of the runner holder, opposite the first end, the first part having a projection inserted into an inlet of the second part, which projection can slide into the entrance such that the length of the runner holder can be adjusted. The runner holder further comprises at least one pressure means situated at the first end and/or the second end.
