Abstract (en)
Lighting device, comprising a first housing (7), a lighting means (12) arranged on a printed circuit board (8), an electronic circuitry (13) accommodated in the first housing (7) for operating the lighting means (12) and electrically connected to the lighting means (12) by wires, printed circuit board (8) being mounted to an off-centre pivot point by holding means (1) to the first housing (7), whereby the printed circuit board (8) is designed to be rotated in a plane parallel to the a first housing (7) whereby the holding means (1) keeps the printed circuit board (8) being mechanically connected to the first housing (7).
