Abstract (en)

[origin: WO2019170355A1] A substrate mixture for fungal material contains water, a binder and nanocellulose. The substrate mixture is suitable for producing a fungal culture or for storing, transporting or applying fungal material, such as fungal spores, mycelium and hyphae, and thus makes possible the treatment of materials based on cellulose, hemicellulose and/or lignin, soil and cultivated land, waste from agriculture and forestry, plants and wood, bioaugmentation, bioremediation or biological pest control.
