Abstract (en)
[origin: WO2018185361A1] A device (500) for joining and separating two pipes (600). The device (500) comprises the first gripping instrument (1 10) and the second gripping instrument (210, 212, 214), which are arranged to be in the closed position (A1) and the open position (A2). In the closed position (A1) the inner surface of the second gripping instrument (210, 212, 214) matches the outer surface of the pipe (600), which has an outer diameter (d). In the open position (A2), the second gripping instrument (210, 212, 214) is arranged to receive the pipe (600) from the first transverse direction (-Sz). The device (500) also comprises the devices (300) for moving the first gripping instrument (1 10) and the second gripping instrument (210, 212, 214) longitudinally (Sx) with respect to each other. The inner surface (400) of the second gripping instrument (210, 212, 214) forms the first angle (402) projecting towards the said space (290) for the pipe (600).
