Abstract (en)

[origin: WO2018185717A1] Plant (1) for manufacturing products, in particular a plant for applying a coating on parts, comprising a plurality of apparatuses (11, 12, 13) characterized in that it comprises: - at least a radiofrequency transmitting device (111, 112, 113), transmitting with a preset periodicity a radio signal containing at least a unique identifier, allowing to identify each apparatus (11, 12, 13); - at least a portable device (31, 32) carried by an operator (21, 22) receiving the signals transmitted by the radio-transmitting device (111, 112, 113) embedded in the apparatus (11, 12, 13); - at least a specific program (41, 42) loaded on and performed by said portable device (4) for extracting an univocal unique identifier of said apparatus (11, 12, 13) and detecting the distance operator-apparatus through the analysis of the trend of the radio signal; - the radio-transmitting device (111, 112, 113) being an electronic module operating according to the Bluetooth® standard, performing an active function of transmission known as advertising function of beacon, according to which it transmits periodically its unique identifier and optionally also a part of the measurements recorded by the sensors with which is provided, having at least a remote configuring/setting channel through radio-frequency communication with an external control device with which it can exchange data packets; - a connecting procedure between said portable device (31, 32) and the radio-frequency transmitting device (111, 112, 113), in receiving configuration, to receive information on the working status of said apparatuses (11, 112, 113); said signals being transmitted to a remote server (200), preferably a cloud, for monitoring the working conditions of said apparatuses (11, 12, 13) composing the plant (1).
