Abstract (en)  
[origin: WO2018185658A1] The invention relates to a dynamic generator device for a virtual reality system, comprising a mobile pod carrying a seat and mounted on a fixed structure, driving means for inclining the pod along at least two axes of rotation, the two axes passing close to the head of a user when the user is installed in the seat, and means for controlling the drive means depending on the dynamic effects sought. The invention also relates to a virtual reality system comprising such a device. Said invention is applicable to simulators, in particular driving simulators.
