Abstract (en)  
[origin: WO2018185074A1] The invention relates to a traction battery, comprising a plurality of battery cells (2) which are wired to one another and which each have positive and negative electrode plates arranged alternately with one another in a cell housing, and having a plurality of battery troughs (7), which each accommodate a plurality of battery cells (2) in series, each battery trough (7) is designed to be electrolyte-resistant and electrolyte-tight, and having a battery box (13) accommodating the battery troughs (7), wherein adjacent battery troughs (7) are arranged at a distance from one another, leaving a gap space (17), and wherein, underneath the battery troughs (7), a volume space is provided, which is in fluidic connection with the gap spaces (17) and is used as a distribution gap space (22) for all the gap spaces (17), and having a forcible flow system for a cooling medium, which has a means for generating a forcible flow, which is connected to the distributor gap space (22), for which purpose the distributor gap space (22) has at the inlet end (26) thereof a connection for a cooling medium feed line.
