Abstract (en)

[origin: WO2018184215A1] The invention relates to a heatsink module (13), in particular for use in a battery charger (1), said heatsink module (13) comprising a bottom wall (13A) extending along a longitudinal plan (β) and a side wall (13B) extending from said bottom wall (13A) orthogonally to said longitudinal plan (β), said bottom wall (13A) and said side wall (13B) defining at least one internal space called "reception space" (13E1, 13E2), said at least one reception space (13E1, 13E2) being configured for receiving at least one magnetic element (14B, 14C) for transferring electrical energy of an alternating current into electrical energy of a direct current, the heatsink module (13) comprising a cooling channel (13B1) formed inside the side wall (13B).
