Abstract (en)
[origin: WO2018184834A1] The invention relates to a method for implementing a wiring on a matrix of conductor connection devices, in particular terminal conductor connection devices for connection of conductor ends, in particular to at least one series terminal block or a plurality of series terminal blocks that each consist of a plurality of series terminals, on or by means of a wiring device, comprising, inter alia, the following steps: •by means of at least one luminous element, individual, preferably two conductor connection devices to be interconnected according to the wiring diagram, in particular terminal conductor connection devices are illuminated in the matrix directly or indirectly in accordance with the wiring diagram; and •the conductor connection devices that are illuminated by means of the luminous element and that are to be interconnected, in particular terminal conductor connection devices in the matrix are connected to conductors the ends of which are inserted in the conductor connection devices to be interconnected, in particular terminal conductor connection devices in the matrix, thereby establishing a respective conducting wiring connection.
