Abstract (en)

[origin: WO2018185795A1] A built-in electrical device with uniform brightness, comprising a plate (10) coupled to a functional frame (13), said plate (10) having a compartment or opening (38), inside which electrical devices associated with respective control buttons are housed, characterized in that said device includes an optical unit coupled to said functional frame (13) and formed by a light guide (20), which is permanently coupled to an upper surface (21) of said plate (10), said light guide (20) being configured to collect the light coming from a plurality of LEDs (23) placed on said functional frame (13), which send said light to respective optical elements of extension (29) which are optically coupled to said light guide (20).
