Abstract (en)

[origin: WO2018185654A1] According to certain embodiments, a method is disclosed for use in a network node. The method comprises receiving a random access preamble from a wireless device, scheduling a grant of a first uplink transmission opportunity and a second uplink transmission opportunity, and sending a random access response to the wireless device. The random access response indicates information associated with the grant of the first uplink transmission opportunity and the second uplink transmission opportunity. The method further comprises receiving data from the wireless device via the first uplink transmission opportunity or the second uplink transmission opportunity.
